

A man in a light-colored short-sleeved shirt and khaki pants is operating a large, grey, industrial-grade machine in a server room. The machine has a control panel with a small screen and a keypad. The man is looking at the machine and has his hands on it. The background shows server racks and a tiled floor. A large yellow diagonal shape is overlaid on the left side of the image, containing text.

Kodak

i9600 Series Writers

Build your reference
archive quickly and
automatically

The Kodak i9600 Series Writers—the easy way to help protect your critical business records from tampering or loss

When you need a trustworthy copy of an electronic record to validate a transaction, satisfy litigation, or to meet regulatory and audit requirements, will it be there? Reconstructing a record can be perilous. Even in tightly controlled operations, back-up tapes can go astray. Hardware and software become obsolete. Databases housing the metadata defining the layers of electronic records can expire. Migration is expensive and risks transcription errors.

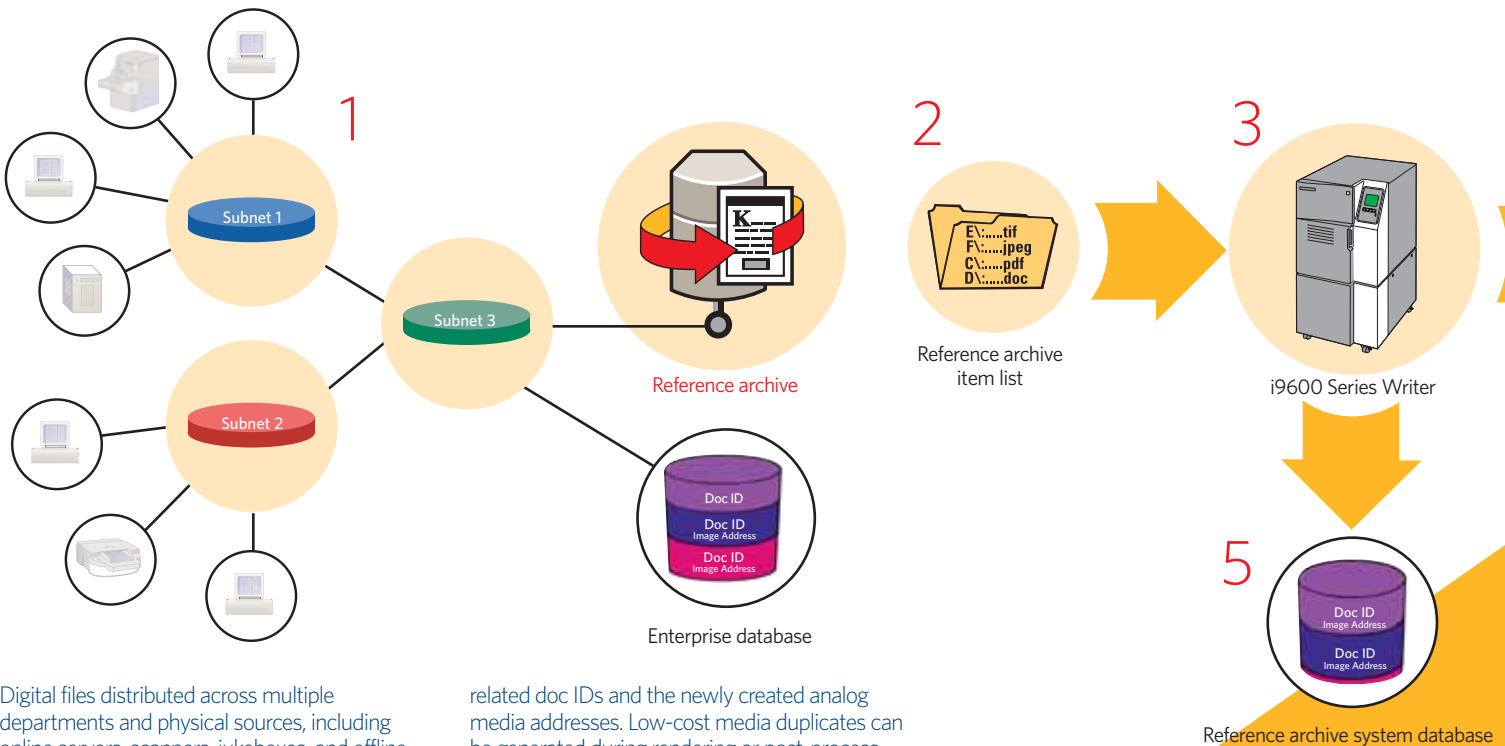

Diversify your records management and reduce your exposure

You can avoid much of the expense and hazard of digital-only records storage by reference archiving critical business documents. Based on technology developed by **Kodak**, reference archiving copies the records you wish to secure to an analog format on ISO-standard archival media. All the information included in the original record is captured in context. These non-volatile documents can be accessed electronically to authenticate current activities such as an online transaction, or to support audit activities triggered by regulatory activities and legal actions. You can also be assured of long-term access and retrieval.

Put your reference archiving on autopilot

The i9600 Series Writers are an ideal way to archive records. They accept digital files, organized by your selected records management attributes—such as class, date, or destruction schedule—and create copies of them on **Kodak Reference Archive Media**. Self-describing indices provide built-in audit trails and help make your reference archive repository accessible digitally through host applications. Reference Archive Media can be automatically searched and redigitized for online access and retrieval to provide short-term validation and long-term storage of records—without burdening your servers.

Reference archive capture subsystem workflow

- 1** Digital files distributed across multiple departments and physical sources, including online servers, scanners, jukeboxes, and offline storage media can be sent to the reference archive. Export management software embedded in enterprise applications selects and groups records into logical lists and/or batch subdirectories for export. Additionally, doc IDs may be included to facilitate additional database updates.
- 2** Image management software converts non-TIFF images to TIFF and the i9600 Series Writer input processor verifies, batches, and delivers the images to the i9600 Series Writer.
- 3** The writer renders analog copies of the records and generates an ASCII text file index containing

- related doc IDs and the newly created analog media addresses. Low-cost media duplicates can be generated during rendering or post-process.
- 4** Standardized media provides compact, secure on- or off-site storage in a human-readable format. Records are easily redigitized and served back to the enterprise on demand.
- 5** The ASCII text file index may be used to populate a standalone reference archive system database and/or merged back into the enterprise database. Either database may be searched using familiar enterprise application screens to perform subsequent retrievals.

Store trustworthy records that can outlast the applications that created them

Maintain the information and let the data go

When you complement a digital-only records management strategy with reference archiving from Kodak, it's easy to see the benefits.

No longer do you have to hope that content and metadata come together correctly to form a digital e-record.

Instead of pulling from volatile components distributed across

servers and applications, you just load media into a retrieval scanner and present the intact record created by the i9600 Series Writer. No compiling or conversion is required.

The whole record is preserved intact in the reference archive, safe from hackers and accidental erasure. There's no need to maintain redundant servers, media, and applications just to provide access to your critical business records generated by your SCM, CRM, ERM, ERP, and e-commerce systems. You can eliminate the expense of media refreshes and format migrations. Instead of incurring ongoing costs to keep data on a server, you can allow information to expire and be routinely purged. The result can be substantially lower total cost of ownership.

Complete your records management strategy

Capture subsystem software and the i9600 Series Writers offer a highly automated method for rendering records to archival format. You can set up a rules-based process to export selected records for reference archiving that works in the background. Duplicating and storing archived records is easy, inexpensive and secure. When users want to refer to specific records, they can search your enterprise database from within their applications. Requests pass over your network to your choice of retrieval

workstations available from Kodak. Here the record will be found, digitized, and returned. Records can be batch processed and automatically managed as folders. The digital images can then be repurposed just like any other digital file. They can be distributed according to the requestor's needs as hard copy output, faxes, or e-mail attachments, or stored on an image server using your current compression scheme. The requesting parties, whether users on your network or external customers or auditors, can then be directed to these images via links embedded in e-mails.

Implement reference archiving with speed and quality

All the hardware, software and media necessary to create and access a reference archive of digital records is available now. The process has been proven already in large-scale document management and content management applications. The core technology is based on ISO/ANSI standards using media with a certified life expectancy of 500 years.* As a records management solution, reference archiving is virtually future-proof. And the i9600 Series Writers provide fast, convenient output with quality that stands up to comparison with a printed page, but with storage and management properties that are much more efficient and cost-effective.

Reference archive repository

Applications for reference archiving

- Transaction records
- Accounts payable/receivable
- e-Commerce documentation
- Online agreements
- Government archives
- Law enforcement records
- Land title documents
- Court documents
- Tax filings & attachments
- Mortgage files
- Patient records
- Brokerage transactions
- Financial services
- Regulatory filings
- HR & pension files
- Inspection notes
- R&D notes, reports & correspondence
- Insurance applications, policies & claims

Get a complete reference archiving solution from the company that's been the expert in secure records management for more than 70 years

Enhance your risk mitigation strategies by adding a reference archive. The technology is available today and based on industry standards. From exporting records to delivering them back to desktops, you can implement a process that's essentially transparent to end-users, yet will deliver complete, reliable records for years to come.

A reference archive begins with a robust record capture subsystem, built around the proven architecture of the i9600 Series Writers. The process includes:

- File transfer from the application system(s) is managed by the **Kodak i9600 Application Software Kit**. It controls formatting and applies standard indexing coding for later automated retrieval driven by request processor APIs.

Compression Factor	i9610 Throughput*	i9620 Throughput*	Packing Density
24:1	85	170	7.225 images/roll
40:1	200	400	17.000 images/roll

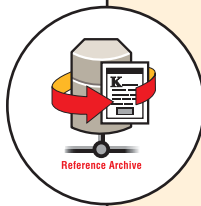

*Average images per minute (ipm); actual performance is dependent upon application

- Output to archival media is performed by the i9600 Series Writer, which operates in an unattended mode. Performance measures appear above.
- Media loading is facilitated by the **Kodak Imagelink Smart Cassette**, model 100 and model 215. For automatic redundancy, two cassettes can be used at once to produce two sets of output with no reduction in throughput speed.
- Compact, archival storage is provided by **Kodak Reference Archive Media**. This standard 16 mm, high-quality microfilm is ISO/ANSI-certified for a life expectancy of 500 years when properly processed and stored under controlled conditions.

It's easy to implement a reference archive as part of your overall records management strategy. Improve your integrity and cost-effectiveness while providing continuous access. Ask your Authorized Reseller of **Kodak** Products to show you how.

Kodak Imagelink Smart Cassette

Digital products high-performance network computer peripherals.

Robust digital processing load, store and retrieve digital documents with ease.

It's analog documents you can see! No technology required.

Trustworthy and secure documents held in a legally acceptable state. Accessible only when you need them to be.

- Weight: 159 kg (350 lbs.)
- Depth: 810 mm (31.9 in.)
- Width: 615 mm (24.2 in.)
- Height: 1196 mm (47.1 in.)
