Until now, scanner management across all brands needed to be performed in-house, with proprietary applications that were separate from other device management solutions. And if two applications were used, inefficiencies of duplication occurred, and created a drag on enterprise core-competency resources. Yet the alternative was lack of visibility and loss of productivity of tens or thousands of deployed scanners. With the introduction of the Scanner Manager and MPS Capture Agent from Kodak Alaris, these issues are eliminated with new advantages gained through its versatile components.

### Scanner Manager and MPS Capture Agent from Kodak Alaris

This Cloud-based solution collects scanner telemetry and performs analytics automatically. Advantages include:

- Greater visibility through monitoring and management allows downtime and maintenance to be smartly scheduled – improving your productivity, profitability, and (for some) regulatory compliance
- Transforms tasks that typically take hours or days into seconds
- Enhances timing of preventative maintenance and consumables replacement
- Trained Kodak Alaris service personnel assure scanners operate at optimal performance when needed most
- Optimization Professional Services use the data to ensure the right scanner mix across the organization (right fit)
- Affordable usage reporting and alert management add-ons to Warranty or Service Plans
- Periodic reports delivered directly to customer personnel

### Greater visibility and productivity management

Scanner Manager by Kodak Alaris – operational reporting and proactive alert management

With Scanner Manager, Kodak Alaris and its Authorized Service Providers expand the value of current Repair and Maintenance and Professional Service offerings by directly monitoring and collecting scanner operational data to deliver usage reports and manage multi-variate alerts for your scanners from Kodak Alaris.
Intelligent connections, ready now

Know more about your scanners from Kodak Alaris and achieve superior productivity with two new connectivity options from Kodak Alaris.

MPS Capture Agent by Kodak Alaris - scanner operational data delivered to existing device management solutions

Kodak Alaris provides an alternative for customers that enjoy savings, visibility and consumable management afforded by Managed Print Service (MPS) providers as well as the use of centralized PC management solutions. The MPS Capture Agent expands these offerings by allowing scanners from Kodak Alaris to be seamlessly integrated into device management solutions for smarter reporting and management.

- Gain actionable insights and access key scanner operational data and status via existing solution dashboards
- Manage scanners as easily as MFPs
- Reduce use of MFPs for scanning, thus avoiding related system failures, including loss of printing capabilities
- Dramatically improve business process outcomes with the best digitization possible

The MPS Capture Agent integrates easily with MPS and PC management solutions complying with industry-standard security requirements.
