Exceptional real-world value: a banking scenario

Applying for a loan or mortgage is a paper-intensive process. The i5650S and i5850S Scanners help streamline this procedure, thanks to smarter sorting and patch sheet recognition.

Today's Challenge: Customer originals need to go back to the applicant, therefore documents must be prepared correctly in the pre-scan process, and accurately separated during post-scanning. This can be error-prone, labor intensive and costly.

Solution: The sorting capabilities of the i5650S and i5850S use a reusable patch-sheet recognition feature. These sheets are separated and outputted to the rear exit tray, while original customer documents are sent to the exception tray at the front of the scanner.

Where automated sorting efficiency meets innovative productivity advantages.
